296000	1940	A drop in production before the war is the only way to account for both the trumpet and sax patents.		
296159	Earliest 400 Sax at saxophone.org – Buescher said in 1944 that “only a few” were sold before Pearl Harbor on 12-7-1941 yet that puts this list two years off. This does not fit with the above range for trumpets and cornets with the “Pat Apld For” mark ending in late 1938 at around 293000. I will have to assume for now that the 400 saxophones came out at the same time as the trumpets, or soon after, and were produced for two years before production was halted. The government bought the remaining stock and ordered some more during the war but aside from this, production was halted.

300500	1942	The US government bought up some remaining stock of instruments and had a contract for a limited number of 400 model saxophones but apart from that, production ends. Buescher made mainly plane altimeters during the war but also made gun-firing mechanisms, radar assemblies & Pitot tubes.
